Newborn Screening:
Required Information and Correction Requests

All fields on the Newborn Screening (NBS) Filter Paper Form (DHHS Form 3105) are important. Many fields are required for screening at the North Carolina State Laboratory of Public Health (NCSLPH).

Required demographics for the NBS Filter Paper Form:

- Newborn’s Last Name
- Mother’s Last Name
- Newborn’s Birth Date
- Newborn’s Birth Time
- Specimen Collection Date
- Specimen Collection Time
- Gestational Age
- Birth Weight
- Submitter EIN/Address
- Provider EIN/Address

Identifies patient
Impacts calculation and accurate interpretation of results
Required to report results

Due to the time-sensitive nature of NBS, specimens received with missing required data are still screened to provide an opportunity for early detection of conditions. Receiving this missing information is critical for accurate and complete screening and reporting.

When required data are missing and the specimen is screened, a results report is issued with a comment and Submitters receive a copy of the Correction Request for Submitted Newborn Screening Specimen. The specific missing data fields are underlined in bold on the results report.

Example comments:

Specimen received is Missing Required Data. Please contact NCSLPH to provide missing demographics via a Correction Request and receive an updated NBS report. If missing demographic data cannot be provided, please collect a new filter paper specimen on DHHS Newborn Screening Filter Paper Form and resubmit.

Results were interpreted as Abnormal or Urgent for specimen received with Missing Required Data. Please contact NCSLPH to provide missing demographics and receive an updated NBS report. If missing demographic data cannot be provided, please collect a new filter paper specimen on DHHS Newborn Screening Filter Paper Form and resubmit.

Submit the Correction Request as directed and an updated results report will be generated when the information is received.
